To whom it may concern,

I'm writing to apply for your undergraduate summer internship in the Columbia Business School. Programming is my passion, but I would like to develop my cross-disciplinary skills through the Risk and Operations program. My skill set includes several programming languages including Python (SciPy, matplotlib, etc) and R. Although the work experience is limited, I have created numerous side projects using data analytics. Most recently, I mined twitter data during President Obama's farewell address and conducted sentiment analysis using IBM Watson's API. I have taken statistics and calculus classes and would like to develop my skills further.

As a developer, I have create numerous projects, but my speciality lies in Android development. I am part of the Rutger's Mobile App Development club and meet with clients weekly to organize contracts with other developers on campus. One of our current projects include creating an app for Johnson and Johnson to securely transfer patient data under HIPAA regulations.

I am also an experienced in entrepreneurship, as I am currently running a startup-like initiative at the Honors College in Rutgers. With a $1,000 budget, 20 students work under my direction to learn product-based development and create various tech innovations.

I have enclosed my resume with my contact information.

Thank you for your time and consideration. I hope to prove my dedication and tenacity for learning if selected for the program.

Sincerely,

Revanth Korrapolu
